The why

Our motivation and inspiration

Ok, so you have an award. Now what?

- Grant programs acknowledge the promise of the project

- Actual work adopting, customizing, and creating OER is unrecognized labor (and a lot of it!)

- Limited recognition for impact of projects
  - Student feedback through evaluations?
  - Research projects studying impact?
  - Abstract narrative write-ups on P&T?
    - E.g. DOERS3 matrix

Ok, so you have an award. Now what?

- Grant programs acknowledge the promise of the project
  - ▷ We award based on descriptions of project and potential impact
  - ▷ Funding awarded at beginning of grant cycle
- Actual work adopting, customizing, and creating OER is unrecognized labor
  - ▷ And this often requires a lot of work!

3

Limited recognition in formal structures

Include award on P&T

Also potentially collect:

- Student feedback through evaluations?
- Research projects studying impact?
- Narrative write-ups on P&T?
  - E.g. <u>DOERS3 matrix</u>

As a part of managing the grant program, I already:

- Ask awardees to report semesterly use of resources

- Calculate impact of program to demonstrate value to administration and donors
  - And celebrate/share success of our efforts with the greater community

But this is all on the programmatic level…

Was there a way to share the impact data and begin to articulate and acknowledge the impact of individual projects?
